

Dear Colleagues,

We are happy to invite you to participate in a scientific meeting entitled “Studying Complex Behavior”, which will take place at the Weizmann Institute on December 13-14, 2017.

Exploring the building blocks and algorithms of complex behavior, and searching for principles underlying innate and learned traits — we bring together experts from genetics, neuroscience, psychology, economics, machine learning, and physics, to share and mix ideas and tools. We hope that the diversity of viewpoints and variety of experimental and theoretical approaches — from insects to mammals, individuals to groups, cells to psychophysics, models to algorithms, normal to pathological — will make a stimulating environment for learning and exploring, together.

Please check the attached poster for more information and the below link for the free registration <http://www.weizmann.ac.il/conferences/SCB2017/>

Best wishes,

Elad Schneidman and Alon Chen
