

Post doctoral position at the University of Haifa

A post doctoral position is available at the [Language and Brain Plasticity Lab](#) of Dr. Tali Bitan, which is part of the [IIPDM](#) and the Psychology Department at the University of Haifa. The position is available starting May 2018.

The focus of this position is a neuroimaging training study on second language learning, done in collaboration with Vanderbilt University. Responsibilities include conducting the study, overseeing students, analysis of fMRI data using SPM and other tools, and manuscript writing. Applicants with experience in analysis of fMRI data are welcome to apply. Preference will be given to candidates with relevant cognitive or linguistics background and to candidates with experience in MATLAB programming.

Research in the lab focuses on the neurocognitive mechanisms underlying learning and rehabilitation of linguistic and cognitive skills in healthy adults and children, individuals with atypical development, and acquired neurological disorders. IIPDM is a vibrant research environment that provides opportunities for interactions and training.

Interested applicants should send their CV and contact information of two references to Dr. Tali Bitan: tbitan@research.haifa.ac.il. Please include a cover letter explaining your current research activities and expertise.
